This presentation extends a number of concepts introduced in Lecture 3, with the aim of offering some structure to how we can think systematically about:

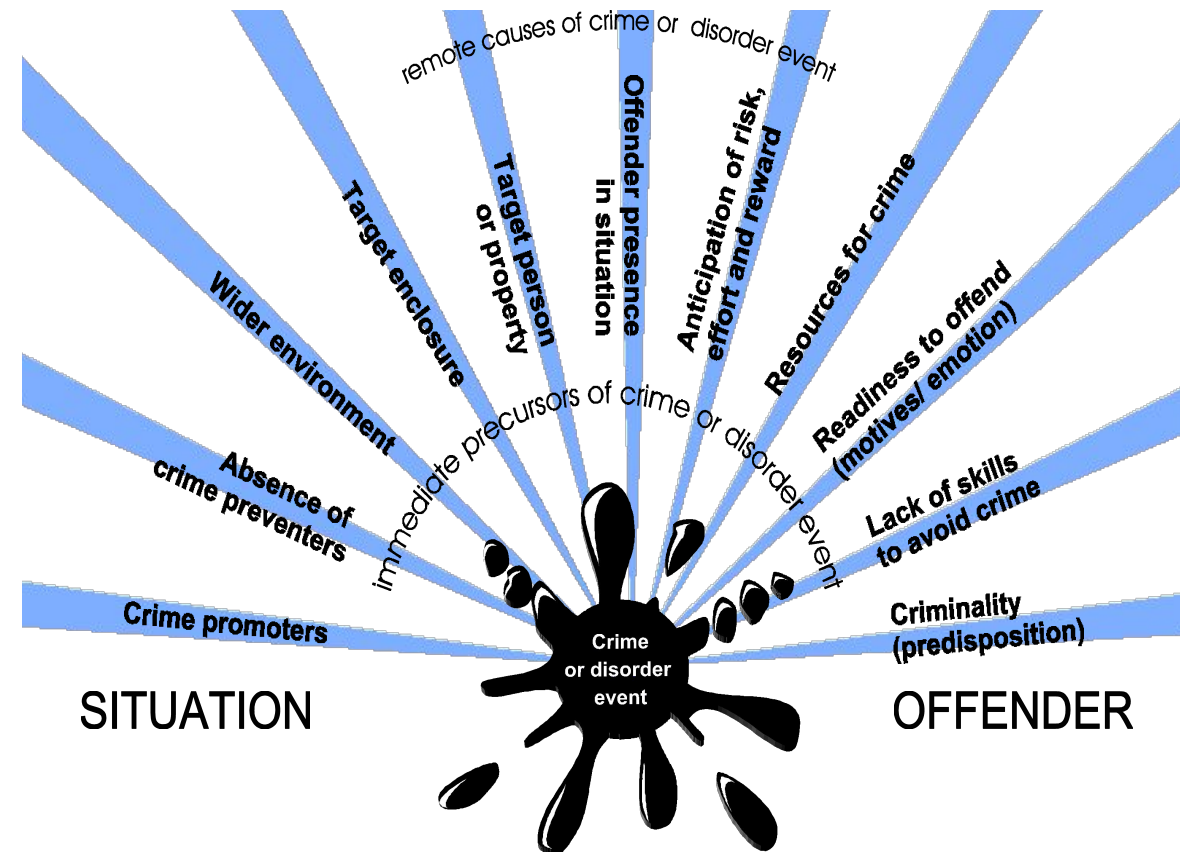

- The **roles** people and organisations play in crime and security
- How the **process** of crime prevention/security **mobilises** those people/organisations to undertake crime preventive roles and/or to cease acting as crime promoters
- How these **roles**, and the **influences** upon them, could **change in future**, with implications for crime and for security

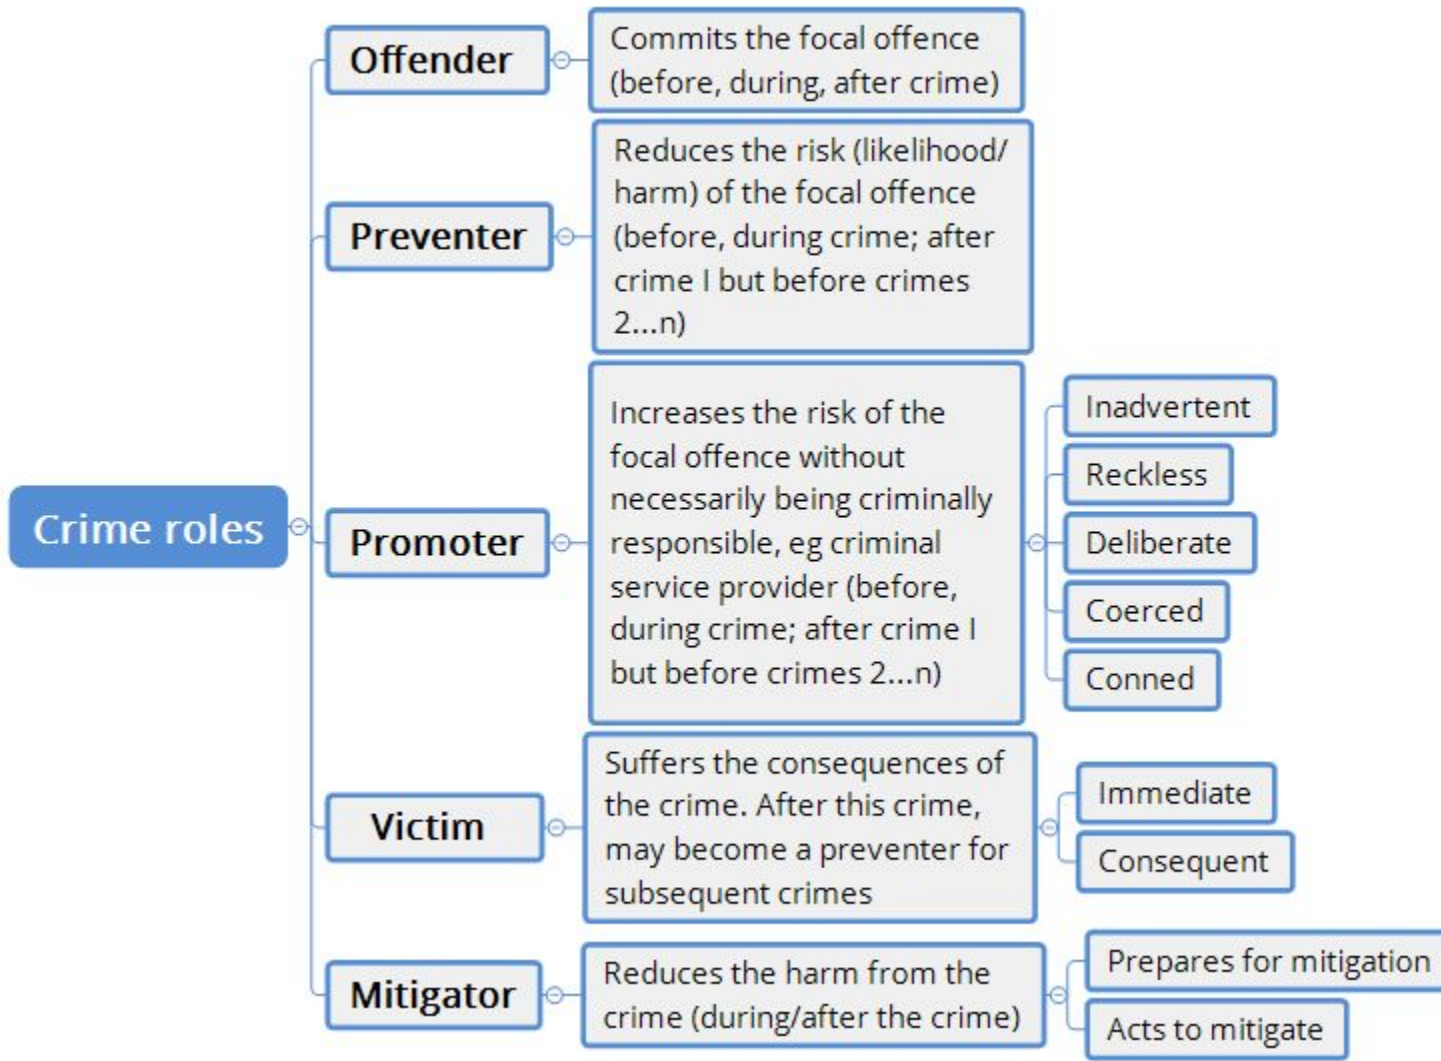

- The conventional Problem Analysis Triangle envisages the offender plus 3 Preventer or 'Controller' roles – Handlers of Offenders, Guardians of Targets, Managers of Places
- Behaviors of the preventers/controllers can be understood in the context of their relationship with '**supercontrollers**' – those who 'regulate/influence controllers' incentives to prevent crime' – now and in **future**
- But...
 - 'Incentives' are only part of the picture
 - There are many more ways of considering crime roles

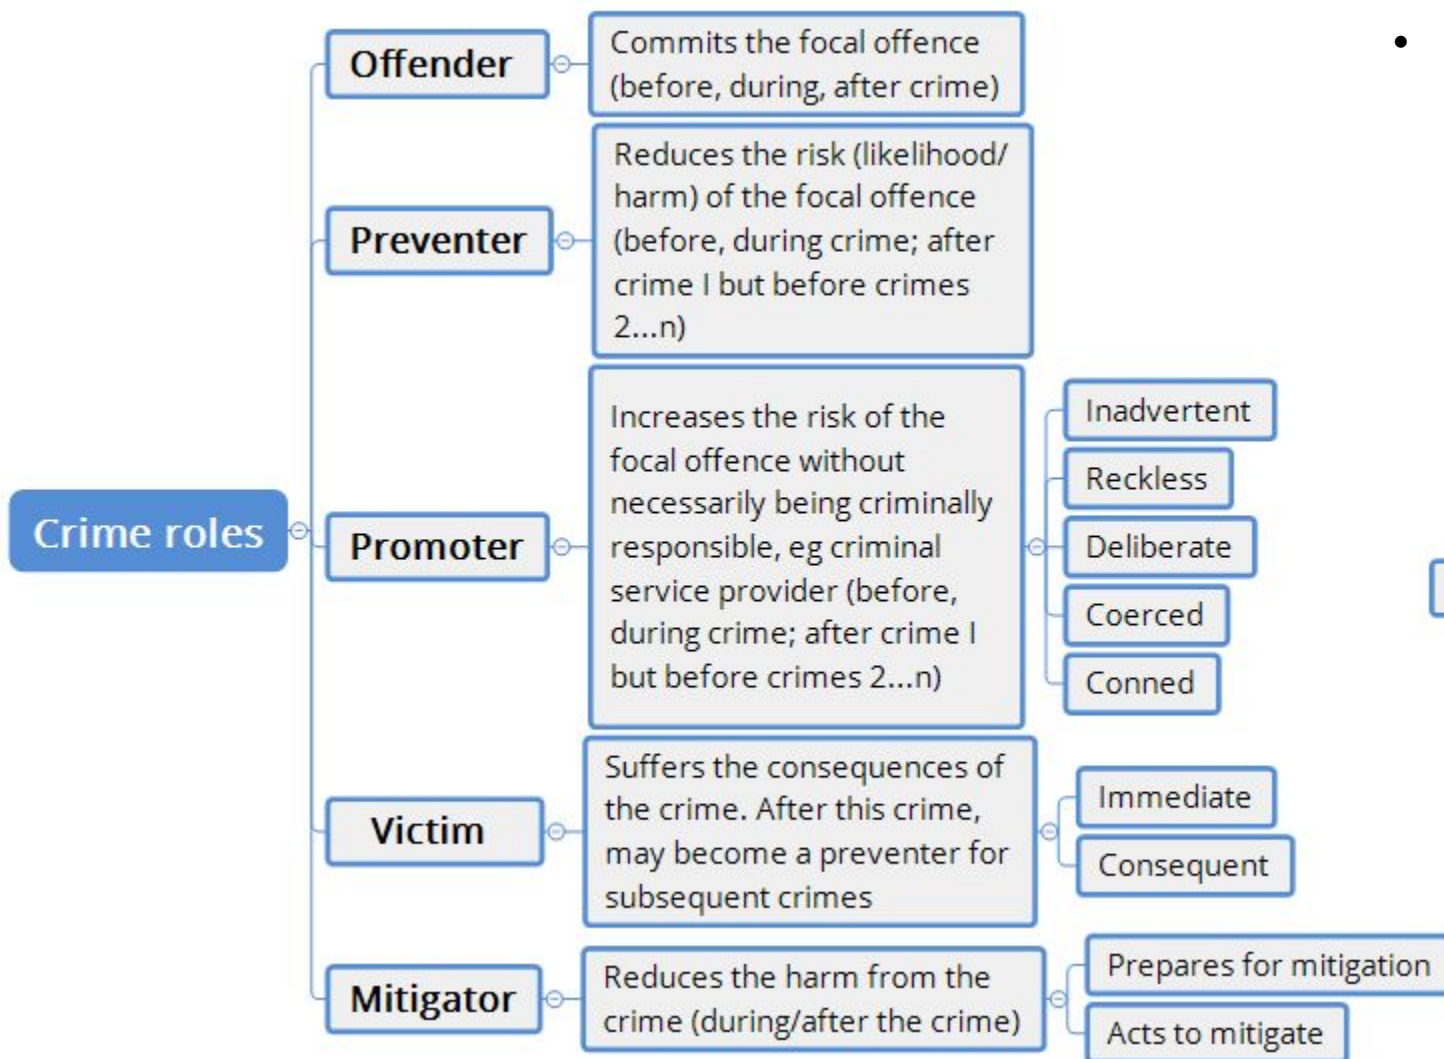

The Conjunction of Criminal Opportunity identifies several roles relating to crime

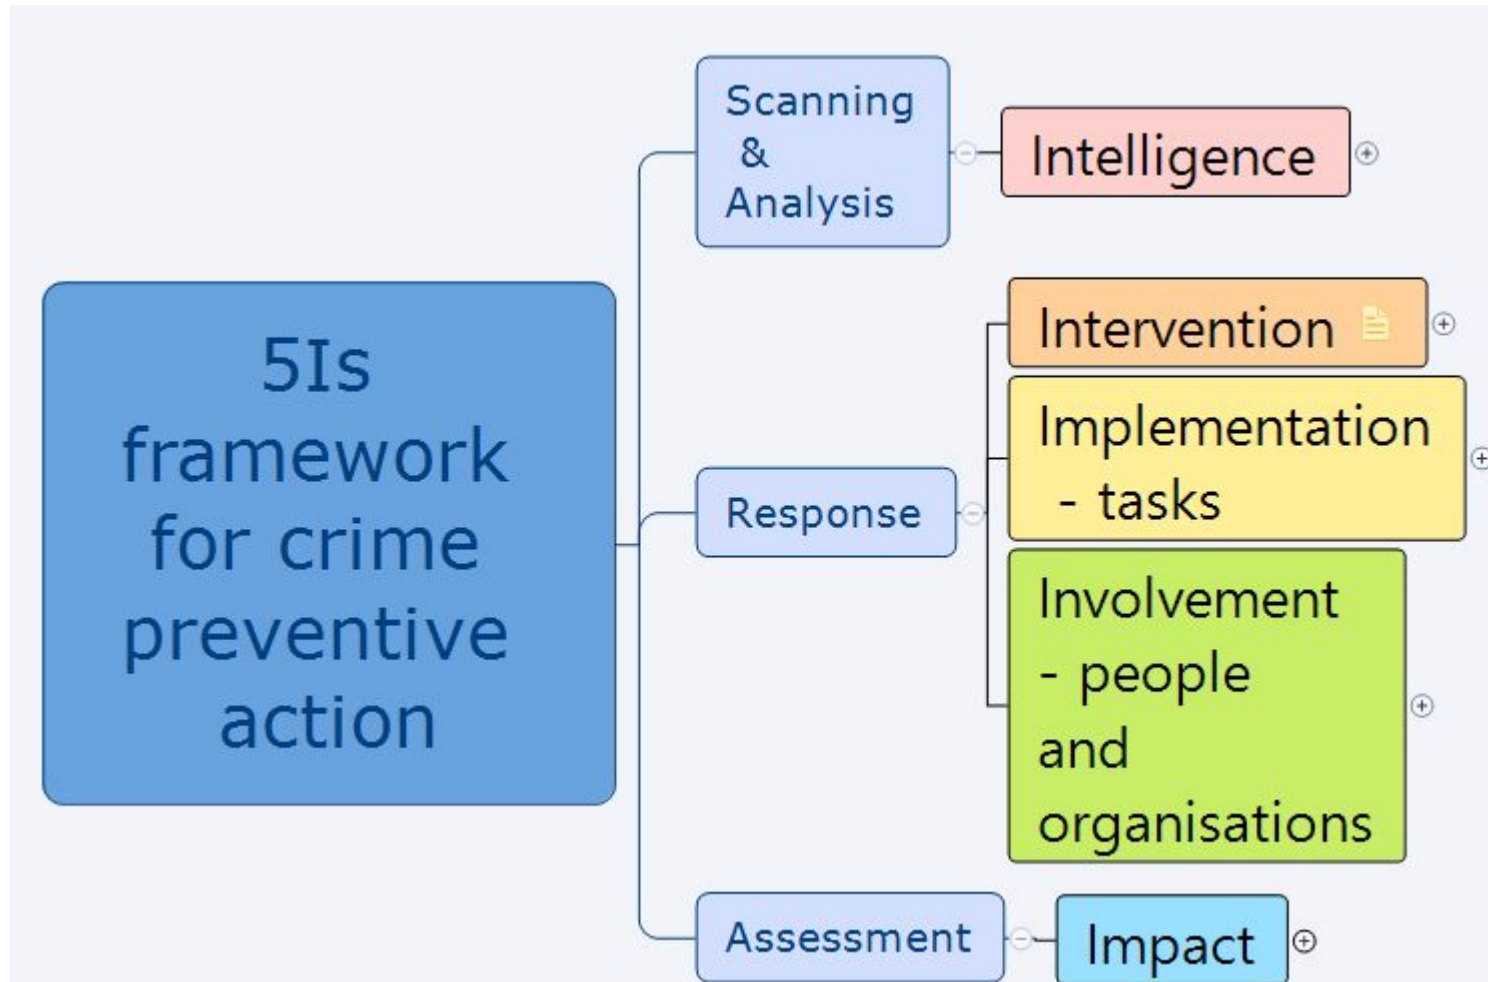

- Preventers can be **official, formal and professional**, e.g. police, IT security managers; or **informal**, e.g. householder protecting their property or a passer-by intervening to thwart a robbery
- Crime roles can **overlap**, e.g. the same person or organisation can be both victim, and preventer or promoter

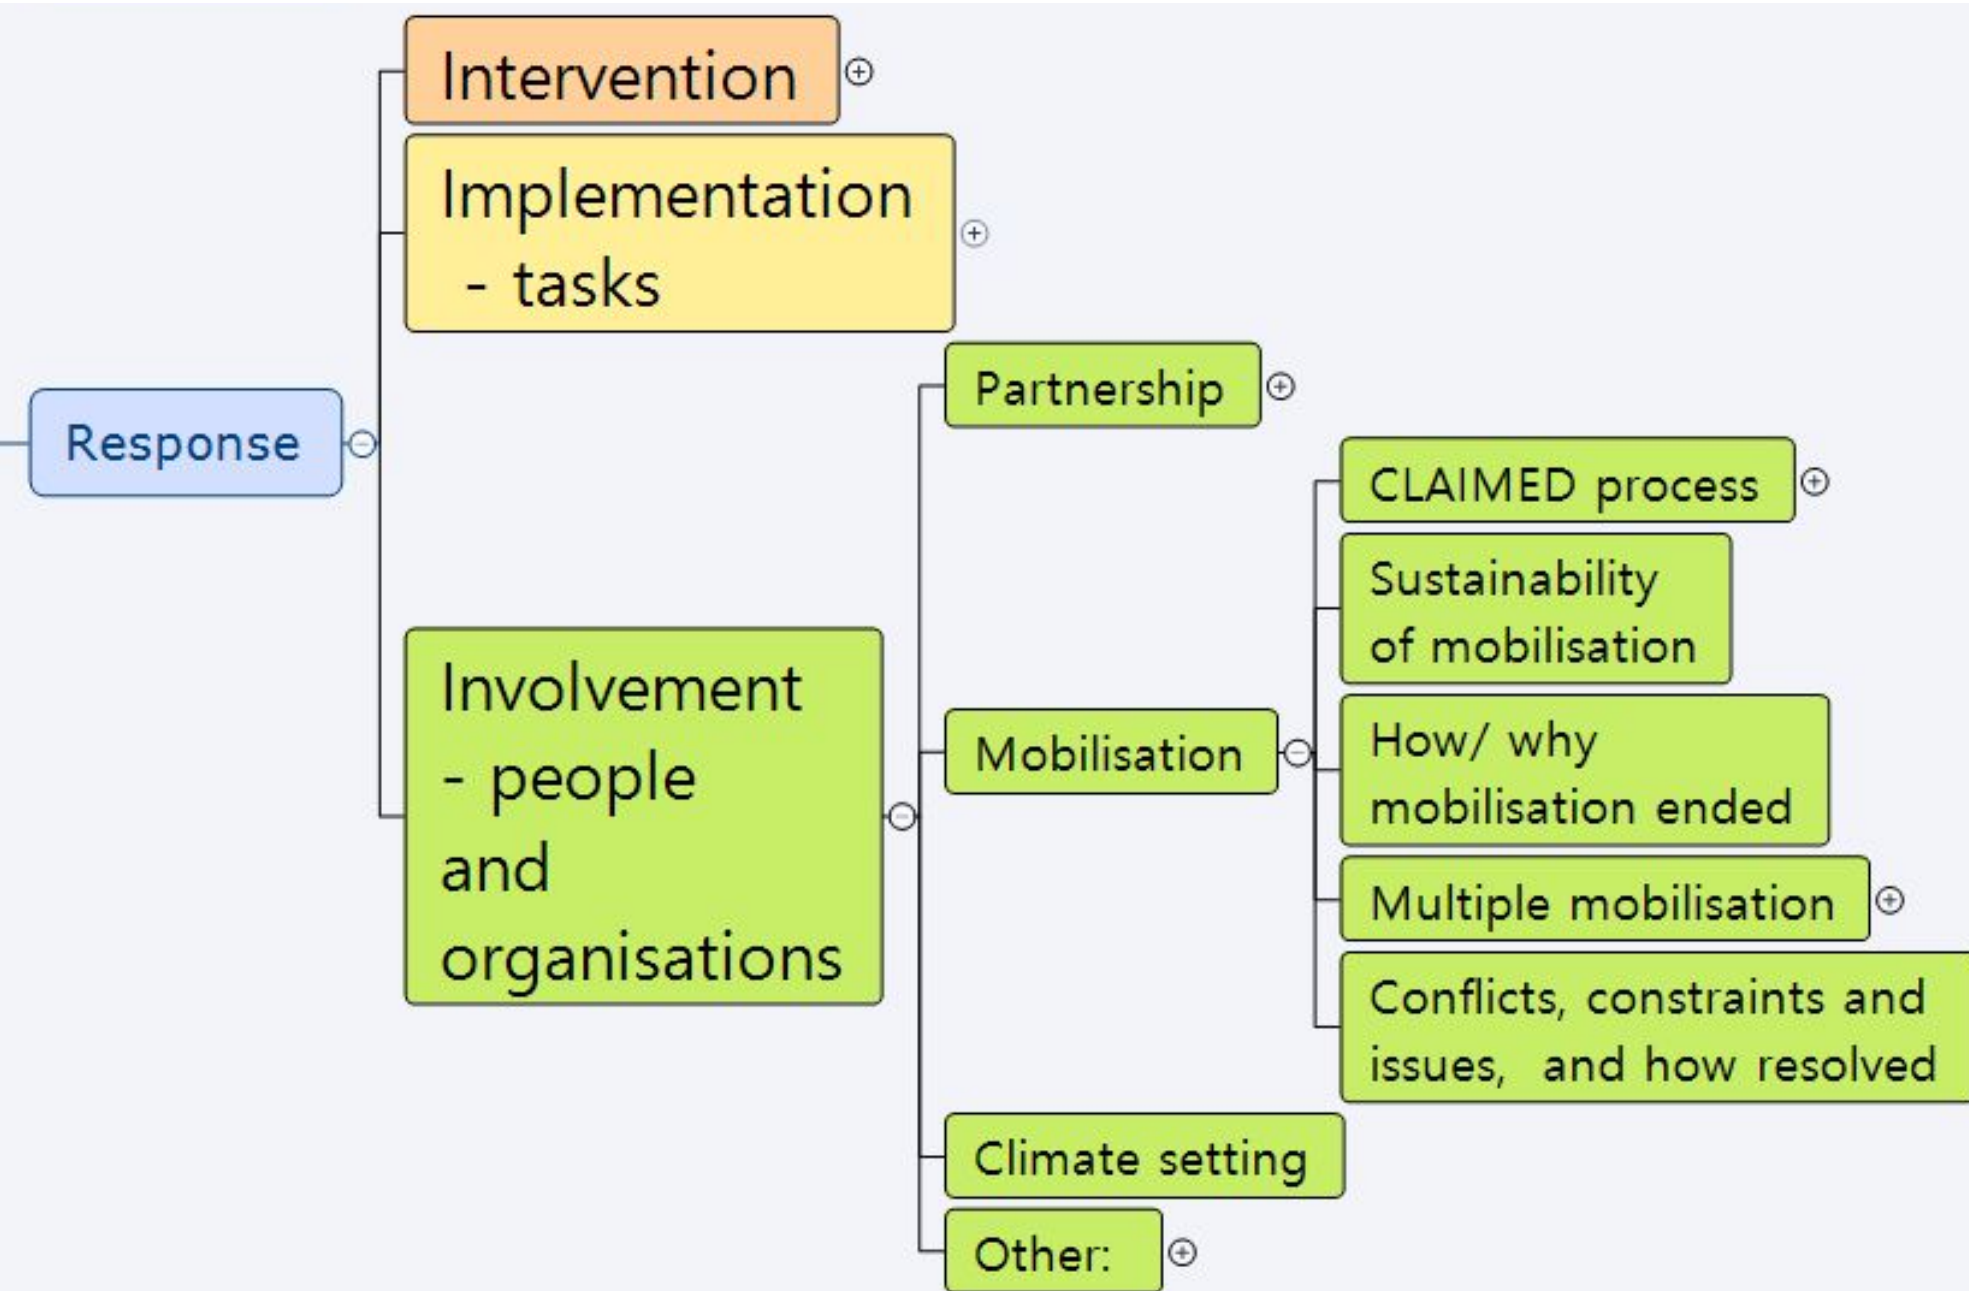

- Crime roles can overlap with **civil** (legitimate) roles
 - E.g. in the normally legitimate activity of **commercial waste disposal**, an Employee of the waste carrier company could be an Offender, a Promoter, a Victim

- We can use this understanding of crime and civil roles to consider *who*, in future, may play *what part* in *generating, preventing, responding to or mitigating crime*

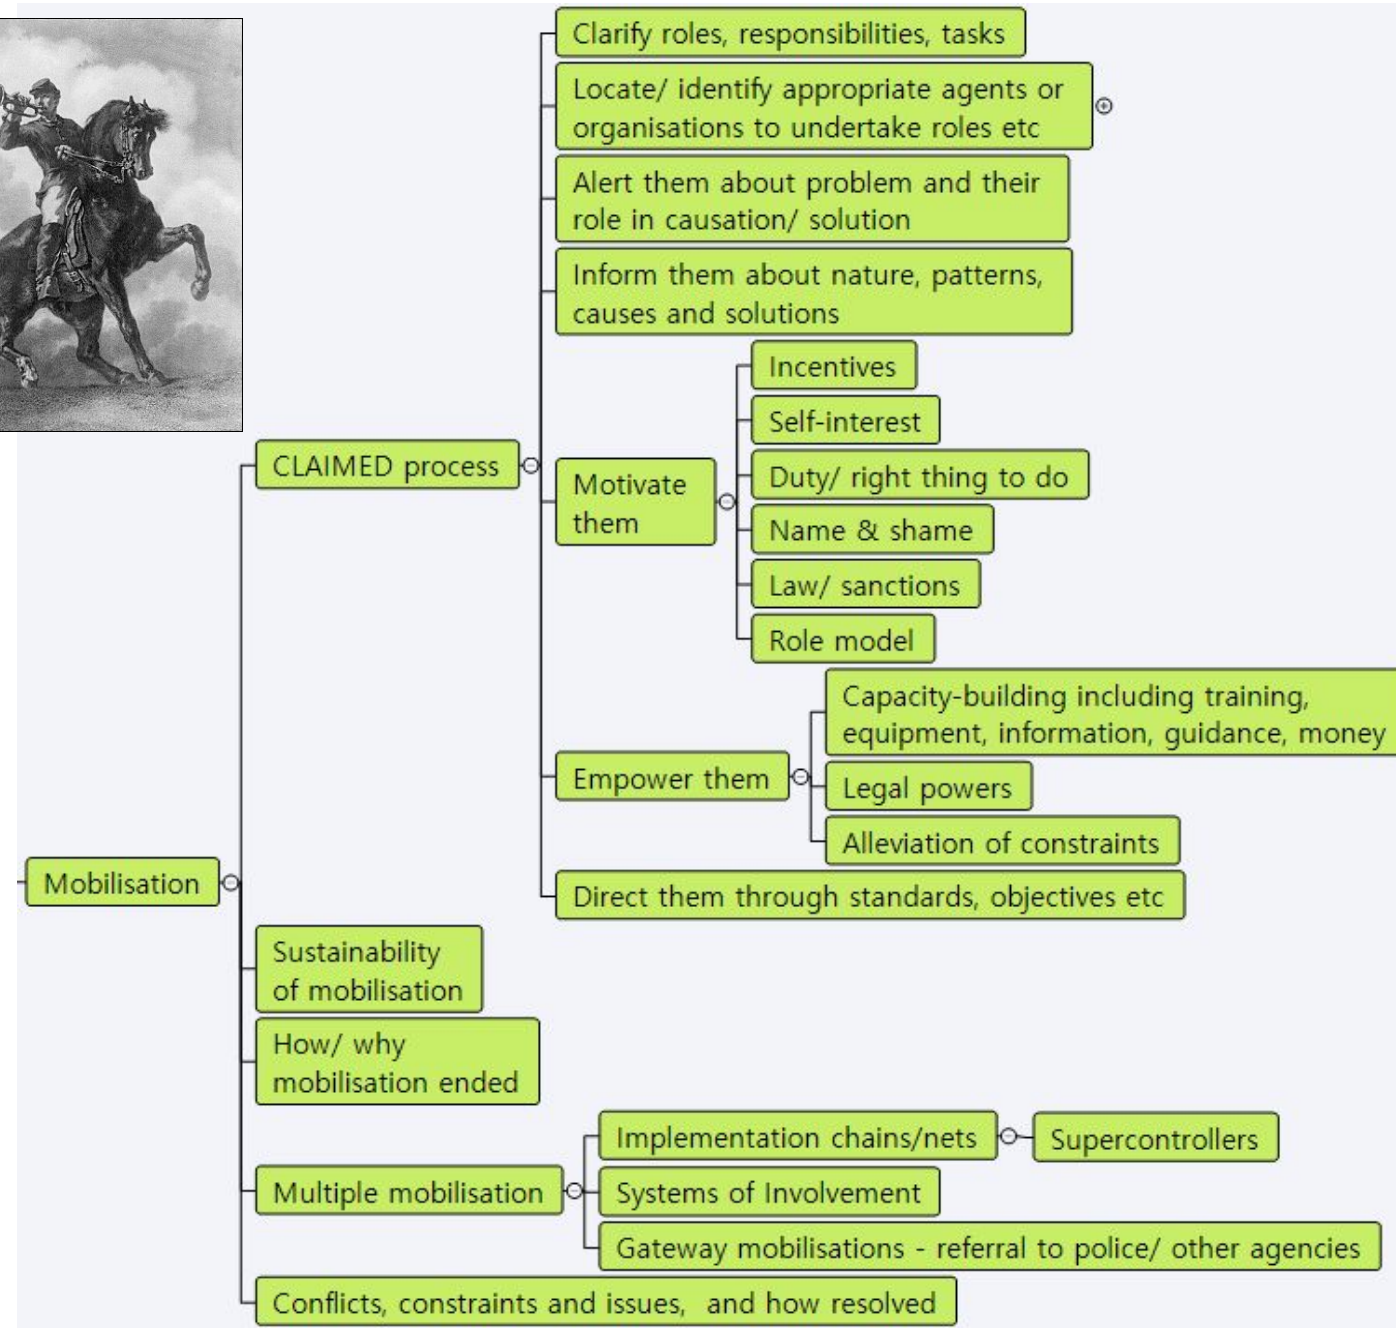

- **Professionals** undertaking the roles of Preventer and Mitigator will usually follow a structured process, typically **SARA**
- The **5Is process model** is a more detailed equivalent to SARA
- In particular, the 'Response' stage of SARA is differentiated in 5Is into 3 distinct task streams
- In turn, these tasks are differentiated further still...

- **Involvement** is about the ‘people and organisations’ side of preventive action
- It can take various forms, including **Partnership**, **Mobilisation** of one set of actors by another, and **Climate setting** (e.g. ensuring that employees accept and actively support IT security practices within a company)

5Is – Involvement – Mobilisation

- Mobilisation is about getting people or organisations to
 - Undertake crime prevention **tasks, responsibilities or roles**, or to desist from acting as **crime promoters**
- Mobilisation can be
 - **Direct** (e.g. motivate people to implement intervention)
 - **Indirect or multiple** – e.g. **chains** of implementation, where one set of people/organisations mobilises another...
 - This includes ‘**supercontrollers**’
- The mobilisation process can itself be characterised by the **CLAIMED** framework
- **We can ask how our forecast future changes in any of these factors (e.g. incentives, legal or practical empowerment) might affect peoples’/organisations willingness or ability to**
 - **Act as crime preventers**
 - **Desist from promoting crime**

- Many roles may have to be influenced in concert, to act as preventers (not promoters) and foster crime-reductive outcomes
- Consider this example from the commissioning, design, marketing, use and disposal of some future product which has the potential to be Misappropriated as a target of theft or Misused as a tool for crime
